

404 flat steel grounding for distribution box

Overview

26 mm² (10 AWG) ground wire must be used, and in all other markets a 6 mm² must be used. Each DISTRIBUTION BOX and controller must be grounded. Grounding of the units: Attach a ground wire from one of. In outdoor or industrial electrical environments, the metal casing of the ip65 stainless steel enclosure must form a complete conductive circuit. Due to the high hardness of stainless steel, drilling holes later is not only laborious but also easily damages the anti-corrosion layer. We. The grounding system provides a low-impedance path for fault current and limits the voltage rise on the normally non-current-carrying metallic components of the electrical distribution system. The smaller bare copper conductor on the left is the equipment grounding conductor providing bonding. It also helps to protect the electrical system from damage by preventing the build-up of static electricity. Grounding a metal electrical.
