

# 808 wavelength VCSEL laser diode

## Overview

The VCx-808C7WA is an 808nm 7W CW VCSEL diode delivering high-power infrared output with strong thermal performance, available in SMD and T-mount packages for LiDAR, sensing, illumination, and laser pumping applications. In its maximum rating diode laser operation could damage its performance or cause potential safety hazard such as equipment failure. Electrostatic discharge is the main reason for the laser fault of the diode. Take effective precautions against ESD. When dealing with laser diodes, use the wrist. The FCVC is a fiber-coupled, vertically-emitting, single-mode diode laser based on a semiconductor quantum-well configuration. The diode chip is housed in a TOCAN package, featuring TEC cooling and a power monitoring photodetector. In addition, it is easy to damage VCSEL structure. The 808nm VCSEL Laser Diode SMD series represents a high-efficiency infrared laser solution in a standard 2835 SMD package. Any user of this site is welcome to upload PDF data sheets for products they use and recommend.
