

Access Switches Cascaded with Switches

Overview

Switch cascading is a traditional method to interconnect multiple Ethernet switches. Among the various topologies, daisy chain and star are the most. Thus, multiple Ethernet switches are connected together using different techniques, primarily switch cascading, switch stacking, and switch clustering. I am following this diagram: I will be using CISCO SG500-28 Managed Switch as my main switch, where another switch CISCO SG250-18 Managed Switch will tap in. Connections: Set up a switch cascade by simply connecting the uplink port of one switch to. Cascading switches refers to the process of connecting multiple switches together in a series, effectively expanding the network's capacity and reach. The below content will show you three methods. Multiple switches can be cascaded in various ways as needed. In a larger local area network such as a campus network (campus network).
