

Add double nuts to cable trays

Overview

The fittings can be fastened to the cable tray rail either with double clamps of type DOP A2 or with truss-head bolts of type FRS and combination nuts. The exceptions to this are vertical bends, adjustable bend elements and fittings with a side height of 35 mm. The systems include numerous connectors, fittings – such as bends, add-on tees, T and reducers, cross-overs and covers – and further accessories. The cable tray systems can be made of high-strength steel wire. The selection of material and finish is a function of the environment in which it is used.
