These short fiber optic cords connect transceivers, switches, patch panels, and servers. Without them, even the best optical modules and switches cannot deliver performance. As data rates increase from 10G → 100G → 400G → 800G, patch cables must handle more bandwidth, more density, and stricter. Here's the truth: if you've had one vendor doing all your fiber, there is a chance that the polarity follows a consistent standard. Patch through from point A to point B.
