

Beam Splitter in Low-Voltage Engineering

Overview

Beam splitter cubes are used in power separation without beam displacement. The heart of the cube is the hypotenuse, to which the appropriate dielectric coating is applied. It is a crucial part of many optical experimental and measurement systems, such as interferometers, also finding widespread application in fibre optic telecommunications. a laser beam) into two (or sometimes more) beams, which may or may not have the same optical power (radiant flux).
