

Cable tray installation elevation diagram

Overview

Download our AutoCAD drawing featuring plan and elevation views of a cable supports tray, also known as cable trays or wireways. The following pages address the 2014 National Electrical Code® requirements for cable tray systems as well as design solutions from practical experience. An elevation benchmark (preferably set by the general contractor) can be transferred via laser level or transit to convenient points along the length of the tray run. Once the lengths and quantities of the hangers are. en completely installed, without damage either to conductors or structural system use maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when. Dedicated cable tray installation zones alert other engineering disciplines to avoid designs that will produce equipment and material installation conflicts in these areas!! As more circuits are added, the cable tray installation zone will increase only a few inches. The Ladder Tray features light, rugged, tubular steel construction.
