

Can dismantled fiber optic cables still be used

Overview

Fibre cable salvage involves recovering and repurposing old or decommissioned fibre optic cables. These cables, originally installed to support communication networks, become obsolete due to technological advancements. Salvaging them provides a way to recycle valuable materials, such as glass and plastic. Can fiber optic cable be recycled?

Yes—fiber optic cable can be recycled, but it needs the right route because it's a mixed-material product (glass fibers, plastics, and reinforcement), not a clean metal stream. The components, such as the polymer casing, are stripped apart and sorted before being independently repurposed and used in the creation of other useful items, like plastic. Fiber optic cables have been at the forefront of communication technology for decades, providing unparalleled speed and reliability. If you'd also like more information about what you can use it for and creative ways to dispose of it, then please read on.
