

Can fiber optic cables be laid along walls

Overview

This can involve running the cable along walls, through ceilings, or under floors. I want this wire to be installed internally (inside walls like electric wires) so that I don't have to see it. This protective measure shields the fiber from accidental damage, pests, and future renovations, ensuring the cable's physical integrity remains intact. My original plan was to trench new conduit and run CAT8, but given that the existing run is all "customer side" and installed by the former. Fiber optic cable may be installed indoors or outdoors using several different installation processes. Outdoor cable may be direct buried, pulled or blown into conduit or innerduct, or installed aerially between poles. Indoor fiber optic cables are commonly used in buildings, offices. Minimize mechanical pressure on the outer sheath at crossing points: (armoured) cables crossing each other generate points of high pressure, so it is important when laying in figure 8 loops it is done in a correct way. When laying loops of fiber on a surface during a pull, use "figure-8" loops to.
