

# Can power cables and fiber optic cables be stored in the same conduit

## Overview

Conductive optical fiber cables shall not be permitted to occupy the same cable tray or raceway with conductors for electric light, power, Class 1, non?

power-limited fire alarm, Type ITC, or medium-power network-powered broadband communications circuits. This is due to several potential risks and complications that can arise from such an arrangement. Electrical Interference: Electrical cables can produce electromagnetic. In no circumstances shall any indoor cable boxes or reels be stored out-side or in a harsh environment. Watertight containers located outside may suffer from condensation and therefore cannot be assumed to. Can they pull fiber through the conduit with existing power conductors or would it be difficult?

And I guess there's the right-a-way, who owns the conduit. :) Otherwise they would have to dig a trench or use a trencher 1,200ft to our house or via the neighbor behind us. As DPC sez, if the 15kV fries or explodes somewhere, are you going to take a big revenue hit with severed fiber?

The short answer is: generally, no, you cannot run power and data cables in the same conduit, especially in commercial and residential buildings, due to potential interference and safety concerns.
