

# Congo QSFP-DD optical module PAM4

## Overview

The 4x 100G QSFP-DD FR1 optical transceiver that provides 4 parallel 100GE links over 4 single mode fiber (SMF) pairs via its MPO-12 connector. Each fiber pair link is compliant to 100GBASE-FR1 and thus can support a 400GE to 4x 100GE breakout over 2 km. 3df-2024 protocol and 400GAUI-8 standard. The high bandwidth module supports 400G Ethernet connections over parallel. On 400G QSFP-DD, PAM4 is enabled by a DSP (digital signal processor) that acts like a gearbox to convert 8 electrical signal channels to 4 optical signal channels. Electrical signal interface can be 25 Gbps NRZ or 50 Gbps PAM4, and after passing through the DSP Transceiver Optical signal is 50 Gbps. The Cisco® family of QSFP-DD modules provide the industry's highest bandwidth density while leveraging the backward compatibility to lower-speed QSFP pluggable modules and cables. 400G SR8 is designed based on PAM4 (Pulse Amplitude Modulation 4-level) modulation technology, DSP (Digital.
