

Connection between power fiber optic cable and conductor

Overview

OPAC (optical power attached cable) is a type of fiber optic cable that is installed by attaching to a host conductor along overhead power lines. Whether you're planning an FTTH deployment, upgrading a data center, or working in telecom infrastructure, this guide will help you make informed decisions. The powered fiber cabling solution combines high-performance, low-latency fiber-optic data connectivity with a copper low-voltage dc power connection. This enables the connection of any number of powered remote devices without the need for new conduit, bulky extra cable runs or expensive. This composite cable combines the distance and bandwidth capabilities of singlemode fiber with the power-carrying capability of 14-AWG copper conductors.
