

Double busbar connection equipment

Overview

A double busbar switchgear is a type of high-voltage or medium-voltage switchgear that contains two separate busbar systems. Each circuit or feeder can be connected to either busbar, allowing flexible load transfer and maintenance without interrupting the power supply. Recycled cardboard content is minimum 70% (50% in US). Whether the product has been included in a global take-back program. There are two main types — single-bus and double-busbar switchgear. The choice between them affects cost, reliability, and how easy. Eaton's Power Xpert UX system in double busbar configuration is designed for your most critical applications up to 24kV and delivers increased flexibility, reliability and safety. We supply metal-enclosed and air-insulated or fully insulated bus bar systems for the energy transmission in medium voltage applications.
