

Dual busbar metering connection

Overview

Isolator Q1 connects busbar 1, Q2 connects busbar 2 of the corresponding field to circuit breaker Q3. In the case of the coupling field, Q3 connects both isolators. Simplified assembly and connection of electrical power distribution systems and devices ensures that customer requirements can be met more quickly and flexibly. In addition, installation and plant engineers benefit from a simplified configuration and reduced space requirements in distribution. The Multilin B30 bus protection relay features integrated protection, visualization and metering for LV, MV, HV and EHV busbars, providing cost-effective, feature-focused centralized or distributed busbar protection scheme. Use the B30 to protect busbars with up to 6 feeders 2-zones (conventional. MMS is a metal-enclosed, double busbar, air-insulated switchgear system with vacuum interrupters and can be used in applications up to 24 kV. The use of modular circuit-breaker and bus-coupler panels ensures maximum flexibility, while the double busbar installation provides continuous electrical. gned to deliver the power to medium size loads. The range is available with copper or alumin box slots on both sides of the busbar system. Up to 10 tap off ordance with IEC 61439-1/6 and is CE approved. It is manufactured in a certified. Assemble the busbar connection while installing each cubicle. Refer to Access to the Busbar Compartments. Busbar systems in a Metering & Monitoring Panel are the backbone of safe power distribution and measurement accuracy, carrying feeder current from the incomer to metering devices, branch circuits, protection devices, and auxiliary loads while maintaining predictable electrical and thermal.
