

During the optical cable laying process 6

Overview

This procedure requires the cable drum to be placed at an intermediate point and cable drawn in one direction of the route by normal end-pull techniques. The Fiber Optic Association, Inc. (FOA) was founded in 1995 to help develop the workforce to build the fiber optic networks to support a rapid expansion in communications and the Internet. The risk of damage occurring during the installation process rises with the temperature. Ensure that the installation area has no objects that could damage the cable such. The objective of this document is to be an optical fibre cable installation and laying guide, addressed to new installers, also being useful as a reminder to experienced installers. Fiber optic cables can be easily damaged if they are improperly handled or installed.
