

Electric transmission tower optical cable

Overview

Pre-terminated FTTA Jumper Cables simplify fiber-to-the-tower routing, accelerate installation work and reduce system downtime, while Hybrid Trunk Cables combine low-loss optical fibers with copper power conductors to create integrated, adaptable tower connections. An optical ground wire (also known as an OPGW or, in the IEEE standard, an optical fiber composite overhead ground wire) is a type of cable that is used in overhead power lines. Such cable combines the functions of grounding and telecommunications. An OPGW cable contains a tubular structure with. Electrical utilities have networks used to transmit and distribute electrical power over a large geographic area. In their served areas will be power generating stations, alternative energy sources (solar, wind, geotherman, etc.), substations for distribution and microgrids. These rugged, armored cables withstand harsh. Combining electrical protection with high-speed communication capabilities, OPGW cables are rapidly becoming the backbone of efficient and resilient power grids worldwide.
