

Fiber Optic Cable Circuit Breaker

Overview

A fiber optic circuit breaker is a protective device designed to safeguard fiber optic communication systems from electrical faults and overcurrent conditions that could damage sensitive equipment. The REA Arc Protection System is designed to give fast trip commands to all circuit breakers that may feed an arc fault in low voltage or medium voltage air-insulated, metal-clad switchgear. The system optically senses arc flashes very quickly (2. It stands alone, installs easily, and. Some example embodiments may enable the provision of a high speed and low cost optical circuit breaker device that can protect photoreceivers and other optical devices in a manner similar to the way an electrical fuse or An optical circuit breaker includes a main optical transmission path including. Use arc-flash detection cables with SEL-751, SEL-851 and SEL-751A Feeder Protection Relays and SEL-710-5 Motor Protection Relays to protect people and equipment from arc-flash events.
