## Overview

Optical fiber laying requirements: the bending radius of the optical fiber should be at least 15 times the outer diameter of the optical fiber, and should be at least 20 times during the construction process; when laying the optical fiber, the rotation of the optical fiber. Optical fiber laying requirements: the bending radius of the optical fiber should be at least 15 times the outer diameter of the optical fiber, and should be at least 20 times during the construction process; when laying the optical fiber, the rotation of the optical fiber. The Fiber Optic Association, Inc. (FOA) was founded in 1995 to help develop the workforce to build the fiber optic networks to support a rapid expansion in communications and the Internet. The charter of the FOA was to promote professionalism in fiber optics through education, certification, and. Recommendations for Fiber Optic Cable Installation Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. During installation, all curvatures should be smooth. (1) Check the routing direction, laying method, and joint position of the optical cable. FO-VC2 JOINT USE - VERICAL MIDSPAN CLEARANCES 48.
