

Fiber Optic Sensor 485 Communication

Overview

Fiber optic transceivers play a crucial role in enhancing RS485 communication systems by addressing challenges related to long-distance transmission, electromagnetic interference, high bandwidth requirements, electrical isolation, and security. These systems support various field bus protocols, including MODBUS, MODNET-1/SFB, BIT-BUS, SAIA-S-BUS. This manual describes the optical fiber converter for the conversion of optical and electrical signals for SIPROTEC devices and includes information about device properties, connection options as well as information about the device configuration. By transmitting serial data over optical fiber, these serial to fiber converters provide an economical path to extend the reach of RS485 devices. All protocols with 10/11-bit UART data format and NRZ data. Safely add isolated segments to multidrop and point-to-point EIA-485 networks, separated by up to 500 meters. Improve safety, signal integrity, and reliability by using two optical fibers instead of wire to transfer bidirectional serial data. Fiber-Optic Link to EIA-485— Connect to two- or.
