

# Fiber optic cable optical attenuation standards

## Overview

IEC 60793-1-40:2024 establishes uniform requirements for measuring the attenuation of optical fibre, thereby assisting in the inspection of fibres and cables for commercial purposes. Fiber optic testing of a newly installed system not only verifies that the system meets its design requirements, but also creates a performance baseline for all future testing and troubleshooting of the system. Corning recommends that all fiber optic systems be tested to a minimum set. Note: This list was assembled from a number of sources with various dates - we doubt it is complete because they change all the time. A full catalog of TIA specs is at [org/Learning More About Standards and Codes](#) There are a number of ways of finding out more about cabling. Supplement 47 to ITU-T G-series Recommendations provides information on the general transmission characteristics of single-mode optical fibres and cables specified in the ITU-T G. 65x-series of Recommendations related to the practical use condition.
