

Hot-selling solutions for server rack cold aisle models

Overview

Find top-rated server racks with hot and cold aisle containment for data centers. An aisle containment system is a simple way to improve cooling efficiency in hot aisle/cold aisle rack configurations. Essentially creating a room within the aisle, the system helps keep hot and cold air separated to make existing air conditioning systems in data center and edge-of-network. Adaptable to hot and cold aisle containment, the Vertiv Aisle Containment system allows you to deploy containment before or after racks are installed to simplify installation and speed deployment of new data center equipment. Cool Shield™ containment offers state-of-the-art hot and cold aisle containment solutions designed to maximize data center efficiency while significantly reducing. Aisle containment top roof ceilings, walls and end of row doors are designed to help maintain optimal operating temperature in server rooms and data centers in order to lower data center energy demands and save on energy costs.
