

How much wireless router is needed for a 200m fiber optic connection

Overview

For most homes up to 200 m² (or with open layouts where signal must travel ~20-30 meters linearly), a dual-band Gigabit router like the TP-Link EC220-G5 or Intelbras W5 AC1200 is sufficient. If you're using a single-band or sub-Gigabit router with a 200 Mbps plan, you're likely bottlenecked—not by your ISP, but by your hardware.

Network Interface Card (NIC) The NIC is the core component that allows a computer to access the network. With it, computers can send and receive data between network devices. A fiber-optic connection is the best choice for fast home internet as it has a number of advantages compared to traditional copper cables, such as faster speeds and less interference. When you compare internet plans offering gigabit speeds or higher, ensure your router supports these. However, you need a router capable of supporting multi-gig speeds to get fiber internet connectivity. I worked with the Cybernews research team to review and compare different routers and give. The best router for fiber internet is one that matches your plan speed, home size, and how you use your connection.
