

How to insert the fiber optic cable protection tube

Overview

Insert the Cable: Position the cable into the designated entry hole of the closure. Seal with Tape: Wrap self-adhesive sealing tape between the two sealing rings to align with the outer diameter of the rings . We invite You to watch our video tutorial on creating fiber optic drop cable splicing and protectingDevices used in the movie as follows:1. The journey of an optical fiber cable begins at the optical distribution frame (ODF) or panel, where it must be organized, protected, and managed. A protection tube is essential to ensure the fibers are. Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. During installation, all curvatures should be smooth. It also highlights key differences from standard fiber cables and important precautions to ensure safety and performance. With proper. Never directly pull on the fiber itself. You should pull on the fiber cable strength members only! Never exceed the maximum pulling load rating.
