

How to install track lights in a distribution box

Overview

To ensure a safe and successful project, follow these essential steps: Plan your track lighting system carefully. Design your installation using an existing, switch-equipped electrical box. Measure the length of the ceiling. If you're here, chances are you want two things: (1) a clean, safe, code-compliant installation you can actually complete, and (2) answers to the real headaches— compatibility, wiring choices, dimming without flicker, and picking the right track for retail or gallery use. Your breaker box may be in your garage, basement, a storage room, or a hallway. It is a metal box, usually flush with the wall. Flip off the power to the light fixture on your ceiling where you want to install your track. Once the track is installed, power runs throughout the entire track so you can slide your light fixtures anywhere you want on the track and still have power. This step-by-step guide shows how to safely install track lighting, connect wiring, and position fixtures for the best results.
