

Industrial Internet Data Center Concept

Overview

Industrial data centers (IDCs) are specialized, integrated systems that combine computing and network infrastructure, storage solutions, and power management with OT software and data management tools. A single scalable architecture, using open Ethernet/IPTM standard networking technologies, is paramount to enable the Industrial Internet of Things for achieving the flexibility, visibility and efficiency required in a competitive manufacturing environment. Converged Plantwide Ethernet. designing data centers. R&M's Automated Infrastructure Management (AIM) system has also become the basis for automating and orchestrating all MAC processes. Data centres are some of the most critical, valuable and fast growing infrastructure that countries, economies and societies depend on. Best practice is also evolving at speed, in terms of design, build, operation and renewal. These technologies drive innovation in application areas such as manufacturing, utilities, transportation, logistics and smart cities. The adoption of IoT technologies.
