

Introduction to LX Optical Modules

Overview

SFP 1G LX is a 1310nm single-mode Gigabit SFP transceiver designed for up to 10km transmission over single-mode fiber and remains one of the most widely deployed 1Gbps optical module in enterprise and campus networks. It is standardized under IEEE 802.3.11. High-Speed Data. Working Principle of Optical Module As an essential component of optical fiber communication, optical modules are optoelectronic devices that facilitate the conversion between optical and electrical signals during the transmission process. Operating at the physical layer of the OSI model, optical modules, also known as network transceivers or fiber optic modules, play a crucial role in meeting this demand. However, many engineers and buyers still have practical questions: What exactly does “LX” mean in SFP modules?

How does it compare with LR, LH, or SX.
