

Is a gigabit router necessary for a 100Mbps fiber optic connection

Overview

For fiber, your router needs the right WAN connection, speed support, and Wi-Fi capabilities. Routers designed for DSL (which uses phone line inputs) or cable (which uses coaxial inputs) won't work. With 100M optical fiber broadband, can I change the gigabit router to increase the network speed?

In fact, when you are using 100M broadband, changing to a gigabit router can not increase the speed of the wired network, but it can increase the speed of the wireless network. Whether the network. Usually with a 100Mbps connection you'll actually get 100Mbps or really close if you use a gigabit port. Depends highly on the modem, ISP, and the line you're on. I would still go for the gigabit. CAT5e can theoretically support 1Gbps, it just isn't certified for it. CAT6. If your router's WAN port is only capable of 100 Mbps, or if its internal processor struggles to manage traffic at gigabit speeds, you'll never experience more than 100 Mbps, regardless of what your ISP is providing. Network Interface Card (NIC) The NIC is the core component that allows a computer to access the network.
