

Is a switch box a type of distribution box

Overview

Whereas a distribution box is designed to distribute electricity, a switchboard is used to operate and control electrical devices or processes. You can think of this as the central point where power is distributed to multiple circuits. We'll chat about what each one does, where it shines, and then dive into how to choose the perfect box for your needs. Plus, we'll sprinkle in some practical tips to make sure you're not. There are two main types of distribution boards, and both play different roles depending on the setup: Main Distribution Boards (MDBs): These receive power directly from the utility or generator and then distribute it to different parts of a building.
