

Main optical cable pole

Overview

Fiber optic poles are vertical structures used to support fiber optic cables, which serve as the backbone of modern telecommunication networks. The Fiber Optic Association, Inc. The charter of the FOA was to promote professionalism in fiber optics through education, certification, and. Deploying fiber above ground on poles or towers removes the need for underground digging and is particularly useful when the ground is uneven, rocky or both. Unlike buried cable, they excel in rural or suburban areas where trenching is impractical. Key advantages include: Cost. To this end, overhead optical cable construction generally has the following eight steps. Choose the type of pole The basic pole height is 7m and the tip diameter is 150mm. can be selected. Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. During installation, all curvatures should be smooth.
