

# Materials List for Power Communication Optical Cable Laying

## Overview

Each optical cable is constructed using a precise combination of optical fibers, strength members, buffer tubes, water-blocking elements, armoring, and protective jackets. Here is the extended technical table of all raw materials used in the fiber optic cable industry. (FOA) was founded in 1995 to help develop the workforce to build the fiber optic networks to support a rapid expansion in communications and the Internet. Relevant test programs ensure long term performance and it is always important that the right principles and methods of installation are followed. This document is part of a suite of Newsletters published by EUROPACABLE: We. Recommendations for Fiber Optic Cable Installation Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. The cable should be bent as little as possible. You will also learn how different aspects of the product can affect budget and design.
