

Maximum distance between switch and fiber optic cable

Overview

In 10Mbps and 100Mbps Ethernet, multi-mode fiber can support up to 2000 meters of transmission distance; In a 1Gbps gigabit network, the multimode fiber can support a transmission distance of up to 550 meters; So multi-mode is now used less. I understand that the maximum safe distance for a CAT6 ethernet cable to stream data is 90m (between source and destination). The camera has its own power supply, so it doesn't need PoE. I have a. The Ethernet cable is also a twisted pair cable, which has different transmission distances according to different specifications of the network cable. Attenuation First is the attenuation of the optical fiber. This is why two. In addition, fiber cables can transmit data over several kilometers without signal degradation, making them ideal for connecting switches in large campus networks and between different buildings.
