

Micro Module PDU

Overview

The PDU100B is a complete miniaturized power supply and linear amplifier for driving piezoelectric actuators. The PDU100B provides variable gain and offset, switchable voltage ranges, and the choice between unipolar and bipolar inputs and outputs. Our customizable HV PDU can be designed for up to 1000V systems, providing solutions for OEMs installing the latest EV battery technology. By combining our high-voltage DC contactors and high-voltage fuses in an IP67/6K9K-rated enclosure and adding a heavy-duty printed circuit board (PCB). Das PDU100 Piezotreiberverstärkermodul ist kleinste und leichteste kommerziell erhältliche Piezotreibermodul. Es kann zwei Zweidraht-Aktoren und -Biegeaktoren bis ± 100 V treiben. Zu den Anwendungen gehören: Das PDU100. The PDU Router module is made generic to allow any combination of busses, TPs and upper modules. The Transport Protocol API has been redesigned. Compatibility between TP in AR3. The PDU100B can drive two-wire piezoelectric. SuperCloud Composers' PDU (Power Distribution Unit) Console Module collects vital physical asset information and sensor data from the PDU itself. Users can obtain vital real time PDU sensor data allowing them to maintain operating efficiency of. At Schleifenbauer, we believe a PDU should adapt to your data centre, not the other way around.
