

Network patch panels are widely used

Overview

They are commonly used to organize in-wall Ethernet cable runs, with cables running from Ethernet wall jacks to patch panels housed in central server rooms. The panel itself is made from blank ports on one side, and a termination point or keystone jack on the other side., from wall outlets, servers, switches) and network devices. Fiber optic patch panels are used in cases where optical fiber cables are used for establishing LAN connections for longer distances. Twisted pair copper patch panels are the simplest types where a. A patch panel is one of those components that is easy to overlook when planning a network — it does not switch, route, or process data, and to the uninitiated it can look like an expensive way to add an extra set of connectors between the cable and the switch. According to Grand View Research, the global structured cabling market is projected to reach \$15.
