

Noise from the electrical distribution box of cold storage equipment

Overview

There is abnormal noise in the distribution box. It is due to the damage of the contactor, the inflexibility of the moving parts of the iron magnet, and the dirt on the suction surface of the iron magnet. This paper presents a sample predictive outdoor noise assessment of a facility that. Larson Davis offers a range of advanced noise monitoring solutions that help address these noise challenges efficiently and effectively. Loose bolts, current transformer mounting, doors, covers and similar parts can resonate with the normal 60-cycle. Cold storage facilities like cold rooms and cold storage warehouses can develop performance issues that affect temperature stability, energy use, and product safety. This guide outlines the most common problems, their causes and how to fix them efficiently to keep your system running at peak. When the cold storage equipment is not used for a long time, the main power supply of the cold storage should be cut off, and the refrigeration unit should be protected from moisture, dust, and other substances.
