First, let us learn the common point among ODF, fibre optic termination box and fiber optical distribution box, actually, they have similar function, we sort out them as following 4 aspects: 1.fiber fixation 2. fiber splicing 3. fiber termination and optical signal splitting 4. appropriate space to meet minimum bending radiusNext, we are going to focus on their difference. Here are their images and brief introduction separately:In summary, we concluded that they vary in the following two points: 1. the number of interfaces 2. use environment. Regardless of the complexity of these 3 types of fiber optic boxes, actually, they are a bracket for the coupler and never participate in any data transmission, the installer chooses them by different application requirements.
