

Railway line relay protection

Overview

Protection relays are essential components in the electrical systems of railways. They are designed to detect faults or abnormalities in the electrical circuits and respond by initiating corrective actions, such as tripping circuit breakers to isolate faulty sections. 7 / 50 / 60 Hz railway systems, the RER670 is your most reliable and future proof companion. This prevents damage to. ABB's time relays are used in railway applications worldwide and have proven their excellent functionality in daily use, even under the toughest conditions. The CT-S range is designed for harsh environments and offers push-in terminals with excellent vibration resistance - perfect for use in. Mors Smitt maintenance and supply free protection relays offer stand-alone current and voltage monitoring for traction equipment as well as infrastructure. They are used for applications like voltage catenary, short circuit, overload and ground fault deteWe can offer dedicated solutions for managing networks and protecting transformers or catenaries against electrical faults.
