Let's make a hypothesis: a newly built residential area introduces a 10kV incoming line and builds a distribution room. The outgoing line from the low-voltage end of the transformer is 0.4kV to the distribution cabinet (primary distribution cabinet), then the outgoing line is led to the. There are a number of responsibilities that fall on the shoulders of the person carrying out the fault diagnosis procedure, where unsatisfactory results are obtained. These include the following: warranties (is the work covered by any warrantee or guarantee and what warranty will be offered to the. Describe three situations which may affect rectification of a fault in an installation. Provision of an emergency supply eg in a hospital or similar situation. Client demand for a continuous supply eg fault in. During the construction and installation process, the methods to solve and prevent the failure of the distribution box include: Quality inspection: Make sure the distribution box and its components meet the standards, check whether the wiring is firm, and whether the materials are qualified. However, in actual applications, distribution bo...
