

SGM Distribution Box Incoming Line

Overview

Generally, the incoming line is a 3pin air switch, circuit breaker, knife switch or other circuit breaker; The zero line is pressed to the neutral terminal block, and the ground line is pressed to the ground terminal block. 5 kV-27 kV metal-clad switchgear presents the features, benefits, ratings and dimensions of the equipment. has been captured in the type GM-SG-AR design. Each of these wires has a specific, non-negotiable purpose: The Phase Lines : You've got three of these bad boys – A, B, and C phases. It is designed and manufactured to operate within the parameters established in ANSI/IEEE C37 standards for metal-clad switchgear. Contact us for sales and pricing information. Why GM-SG?

GM-SG non-arc-resistant, air-insulated, metal-clad switchgear assemblies feature horizontal drawout GMSG. 1) Generally, the incoming line of power distribution box adopts five wire system, that is, a, B and C three-way phase line (the general color is yellow, green and red), one way zero line (the color is light blue) and one way ground line (the color is yellow with green stripes).
