

Sydney Tower Bridge

Overview

Not only is it the largest steel arch bridge on the planet, but it also spans one of the globe's finest natural harbours. Affectionately named the Coathanger by locals, it's an intrinsic part of the city; you can walk or cycle across it and even climb to its peak for incredible views. The Sydney Harbour Bridge is a steel through arch bridge in Sydney, New South Wales, Australia, spanning Sydney Harbour from the central business district (CBD) to the North Shore. The view of the bridge, the harbour, and the nearby Sydney Opera House is widely regarded as an iconic image of Sydney. The BridgeMuseum is more than a museum - it's an invitation to experience the Sydney Harbour Bridge from within, where history, human stories and innovation meet. Here, every step becomes part of a journey connecting past, present and future. Built in 1932, this incredible feat of engineering used almost 53,000 tonnes of steel.
