

Testing Methods for Mobile Power Distribution Boxes on Construction Sites

Overview

Construction sites: formal visual checks weekly; combined inspection and tests about every 3 months for 110V tools, leads and site transformers; RCD push-button checks monthly. Without a robust Portable Appliance Testing (PAT) programme, you expose your workforce to electric shock, fire, equipment failure, data loss, and legal liability. Order this product from HSE Books It explains what to do to reduce the risk of accidents involving. Temporary power systems are essential for construction projects, yet they often introduce serious safety risks. However, exposure to weather, frequent relocation, rough use and other conditions not normally encountered with conventional wiring systems necessitate special consideration not require in other applications or in completed structures.
