

The adhesive on the back of the distribution box won't stick

Overview

This can be due to a variety of reasons, such as dusty or dirty surfaces, moisture, or low-quality tape. If moisture is the issue, try using a hairdryer to dry the surface before taping. Adhesive failures and equipment issues in the packaging process can result in costly downtimes and unsatisfied customers. The stakes are high - every second counts, and every bond matters. If you are having trouble creating a successful bond, one of the factors below may be the reason for your situation: 1) Environmental Temperatures Are Too Low Similar to glues, tapes are engineered for use in specific. Ever grabbed your favorite tape only to find it won't stick?

You're not alone. Lost adhesive power frustrates millions of people daily. I'll show you exactly how to fix this problem. In this guide, you'll learn: Here's why you can trust this advice: I've tested these methods on everything from old. However, if your packaging hot melt adhesive fails to sufficiently bond corrugated paper substrates, it can be frustrating and time-consuming to try and decipher the root cause of the problem. Has The Same Tape Worked Before?

If you used the same type of tape before and it worked, but now it doesn't, then consider what has changed.
