

Warranty for cold aisle server room IP68

Overview

Warranty: This Vertiv™ product is warranted to be free of defects in material and workmanship for a period of (3) Year from Assembly or (42) months from Shipment. An aisle containment system is a simple way to improve cooling efficiency in hot aisle/cold aisle rack configurations. Essentially creating a room within the aisle, the system helps keep hot and cold air separated to make existing air conditioning systems in data center and edge-of-network. Steel Guard's data center cold aisle containment curtains maximize data center efficiency by directing cold supply air from perforated floor tiles directly to server rack air inlets — preventing it from mixing with warm exhaust air and being wasted on the surrounding environment. Cold aisle. More frequently, data centers are using hot and/or cold aisle cooling containment solutions to help with managing airflow, eliminating hot spots and improving energy efficiency. By isolating the cold aisle, containment reduces unintended mixing of cold supply air with hot exhaust air, maintaining uniform, predictable. Our aisle containment systems are designed to optimize energy use and enhance airflow management in data centers, both new and existing.
