

What are the uses of a high core count in El Salvadorian optical cables

Overview

When it comes to high-volume, long-distance telecommunications with data transmission, 144 core is the answer. “The core of a fiber optic cable is the central transparent portion of the optical fiber made up of glass or plastic which actually receives the light signals for data transmission purposes. Among their many features, the number of fiber cores directly affects data capacity and network performance. Understanding this key aspect is crucial for making the right choice. Companies can lease or sell the unused fiber to other providers who are looking for. The number of optical cores in an optical fiber is the total number of equipment interfaces multiplied by 2, plus 10% to 20% of the spare quantity, and if the communication mode of the equipment has serial communication and equipment multiplexing, you can reduce the number of cores.
