

# What is the longest mobile fiber optic cable in meters

## Overview

Fiber optic cable can be run anywhere from 300 meters up to 80 kilometers (roughly 50 miles) depending on the cable type, transceiver used, and network standard. Let's dig deeper into the numbers for full details of your fiber optic cable range: 1 GB/s Network - An OM1 cable supports 1000BASE-SX up to 275 meters, increasing to 550 meters with an OM2 cable. For most enterprise or data center applications using multimode fiber, the practical limit sits between 300 m and 550 m. Single-mode. The maximum transmission distance for MMF cable is around 550m at the speed of 10Gbit/s. How Many Types of Multimode Fiber?

Identified by ISO 11801 standard, multimode fiber optic cables can be classified into OM1. Single-mode fiber optic cables are more suitable for long-distance, high-speed transmission than multimode fiber optics. It is not suitable for 40GB or 100GB transmissions. While still found in legacy systems, it is rarely used in new installations.
